

Shuttleworth updates MIS for wider formats

Shuttleworth has announced the incorporation of wide- and grand-format digital print in the latest version of its eponymous management information system (MIS).

The enhanced MIS can calculate costs for all types of large- and grand-format digital print, including screen – based on the printed area – as well as machine speeds and dpi coverage for inkjet.

Shuttleworth joint managing director Paul Deane said: “We are always working on ways to help printers make

Shuttleworth: MIS revamped

more effective decisions about their business.”

Shuttleworth's MIS can also be integrated with web-to-print software to automate job batching, delivery notes and box label production, as well as part of the overall documentation set.
